This bundle allows our customers a quick and easy way to purchase a full sensory room, with no need to wait for a sensory room design. The bundle is already planned to fit into the corner of any room (assuming no obstructions) and is easy to install. Featuring all of the key ingredients of any sensory room: bubble tube, fiber optics, projection, soft padding, and more! This is a full sensory room with all the hassle taken away!

Perfect for interaction or calming, the equipment can be used for a variety of purposes, including the development of switching skills, cause and effect, color recognition, color matching, motor skills, social interaction and more.

The bundle includes our Superactive LED Bubble Tube with wireless controller, allowing an individual to control the color and bubbles in the tube from a distance of up to 90ft. Likewise, the Fiber Optic Bundle comes with an 8-color controller, and provides for a unique tactile and visual experience. There is no electricity in the fiberoptic strands—only light—which means they are completely safe for up-close work. These controllers now charge using a wireless charging technology and an internal lithium polymer battery, which means no more replacing batteries. Simply charge the controllers up every night!

The Aurora projector, complete with a wheel rotator and 3 effects wheels, adds to the sensory experience, and helps to create a variety of themes. The image from the projector can be shone onto a wall or floor to suit an individual's needs, and additional effects wheels of all kinds can be added to further customize your room, or to create different themes and support a variety of language.

A soft padded platform surrounds the bubble tube and allows the user to sit close and feel its vibrations, while mirrors give the effect of multiple tubes. Soft, thick wall and floor padding is also included to create a 'safe' area for people to sit or lie down and enjoy the calming music and lighting.

Also included is a Mirror Ball and Pin Spot, generated sparkles of light throughout the room, and 5 calming nature sound CDs.

All electrical products in the bundle operate on standard 110v AC power transformed to low voltage.
